

February 28, 2023

Hello Neighbours,

We hope this letter finds you well. As 2023 begins, our team at Potentia is preparing for a busy year ahead. Our contractors are planning to mobilize to site shortly to recommence construction at the Jenner Wind Power Project (JWPP), Jenner Wind Power Project 2 (JWPP2), Jenner Wind Power Project 3 (JWPP3), and Transmission Line 949L.

Construction on the Jenner Wind Projects is planned to begin mid-March with the focus being turbine and blade deliveries, turbine erection, blade installation, collector line and electrical completion, and site rehabilitation. Throughout construction, and notably when turbine components are planned to be delivered to site from now until late August, there will be increased traffic on the roads. Our haul route for turbine component deliveries remain the same and the mapping is available on our website.

The Transmission Line 949L construction is primarily complete. Activities for 2023 will focus on closing out the construction and completing the land rehabilitation.

Please visit our website: [www.jennerwind.com](http://www.jennerwind.com) if you have any questions, or contact out to our team via email ([info@jennerwind.com](mailto:info@jennerwind.com)) or telephone (905.510.8519).

Thank you for your cooperation, accommodation, and support for the Jenner Wind projects. We are excited for the year ahead.

Best regards,

The Jenner Projects Team

Alex Lawson  
Construction Manager
